## 2 Introduction

In April 2009, the LISS panel completed a questionnaire on the amount of contact with family members, friends and acquaintances, about commuting, and about leisure time activities. Additionally, questions were asked about parking policies in the vicinity of their own home and other people's home, and the effect this has on the frequency of visits.

The questionnaire was presented to 8,093 panel members; 5,143 people fully completed the questionnaire (response percentage 64%).

### 3 Codebook

This codebook contains the questionnaire as administered to the LISS panel.

- Variable names: The variable names are printed in **bold** and correspond to the names in the dataset.
- Routing: The questionnaire routing is printed in *italics* for each variable concerned.
- *open*: answer box (no limit to the length of the answer).
- *string*: answer box allowing a certain number of characters (standard is 255).
- *empty*: questions could be left unanswered
- Numerical variables: If ranges were used, these are printed in *italics* in the codebook if the respondent could not see them on the screen. If the respondent was able to see the ranges, the variables are printed in normal letter. *Integer*: If a question is not subject to any limit (integer), no range is indicated.
- 'Fills' (variable text) are given between straight brackets [].
- Variables in between curly brackets {} are not part of the dataset, but the corresponding questions or text were part of the questionnaire.

#### **{intro}**

This questionnaire is about local travel and about contacts and activities for which you, conversely, do not need to travel. Local travel refers to travel to visit friends or family, but also to go to work or a sports club. It is important for this survey to calculate the distances between your home and the places you travel to as accurately as possible. We therefore request that you provide the postal code of the places you travel to, or if you don't have that information, the place name. This information is only used to calculate distances and to determine the type of area where your destination is located. Researchers will never be able to see the postal codes.

We first wish to ask you some questions about people in your environment.

<sup>1</sup> Use nomem\_encr as key variable for merging with other LISS panel studies from the LISS Panel Data Archive: <http://www.lissdata.nl/dataarchive/>
